Art Unit: 2839

DETAILED ACTION

Claim Objections

1. Claims 4 and 9 are objected to because of the following informalities: The recited term "faster" should be corrected to –fastener--. Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 5, 6, 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Witt in view of Schulte.

Witt discloses a cover sleeve 11 and a method inherent for storing and shortening of electrical cord 17. Figures 2-5 disclose slits disposed along the front of the sleeve and an aperture disposed in the back of the sleeve. Witt does not clearly show or disclose that his cover is for receiving the plug 18 or that the cover sleeve 11 middle portion is resilent. However, Witt discloses that the end caps 12 of the sleeve 11 are resilient for passage of the electrical cord therethrough. Schulte discloses that it is old and well known to use a cover sleeve for storing of the plug 22 and to construct the entire sleeve of resilient material. Therefore, it would have been obvious for one of ordinary skill in the art to construct the entire cover sleeve 11 of Witt out of resilient material and

for storing of the electrical plug 18 in view of the teachings of Schulte. Since the plug 18 of Witt has to pass through the sleeve 11 it is easily adapted for storing the electrical plug and constructing the entire sleeve out of resilient material would allow for easier manipulation of the plug and cord of Witt through the sleeve.

3. Claims 2-4, 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over the references as applied to claims 1 and 6 above, and further in view of Lin.

Witt lacks to disclose the use of snap fasteners for securing his cover sleeve around the electrical plug. Lin discloses that it is well known to use snap fasteners 41 for securing enclosed electrical connectors. Therefore, it would have been obvious for one of ordinary skill in the art to provide snap fasteners For the cover sleeve of Witt. The use of snap fasteners would allow the sleeve 11 of Witt to be constructed for easier placement of the plug and cord into his sleeve cover.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khiem Nguyen whose telephone number is 571 272-2096. The examiner can normally be reached on Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, TC Patel can be reached on 571 272-2098. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
